The inventi useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosts of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 9; SEQ ID No 953; 837pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents rat TAO2 protein kinase, which is capable of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polypeptides, are used to screen for modulators of stress responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes; metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinases; and (b) in the form of fragments, for detecting TAO kinase polynucleotides in standard hybridisation and amplification tests. TAO kinases are highly specific for MEK3.
                                                                                                                                                                                                                                                                                                                                     Human ORFX ORF1427 polypeptide sequence SEQ ID NO:2854.

                                                                                                                                                                                                                                                                                                                                                                                                                                               CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CS sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; cosquilant; vasotropic; CC antidiabetic; hypotensive; dermatological; immunosuppressive; antirheumatic; antiarthritia; antiviral; antifungal; antirheumatic; CC antithyroid; and antianaemic. The sequences can be used for determining CC the presence of or predisposition to, or preventing or treating CC pathological conditions associated with an ORFX-associated disorder. The CC nucleic acids can be used to express ORFX proteins in gene therapy CC vectors. The proteins and nucleic acids may be used to treat cancers, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, CC graft vs host disease, cardiovascular disease, diabetes mellitus, CC hypertension, hypothyroidism, cholesterol ester storage, systemic lupus CC erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, CD bacterial or fungal infection, malaria, autoimune disorders, asthma, CC corguilation.         for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS). Addison's disease, anaemia, adult respiratory distress syndrome, allergies, amyloidosis, psoriasis, autoimmune haemolytic anaemia, autoimmune thyroiditis, multiple sclerosis, asthma, osteoarthritis, osteoporosis, rheumatoid arthritis, ulcerative colitis and diabetes mellitus; growth and developmental disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), and myelofibrosis; cancers such as adenocarcinoma and leukaemia, cardiovascular diseases such as myocardial infarction and hypertension; and input diseases such as myocardial infarction and hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human kinase; PKIN-7; therapy; immune disorder; Addison's disease; AIDS; acquired immune deficiency syndrome; growth and developmental disorder; arteriosclerosis; mixed connective tissue disease; MCTD; adenocarcinoma; leukaemia; cardiovascular disease; myocardial infarction; hypertension; lipid disorder; cancer; fatty liver; cholestasis; transgenic animal; gene therapy; antialiergic; antiasthmatic; antithyroid; dermatological; antidiabetic; nephrotophic; antiulcer; antiarthritic; antirheumatic; antipsoriatic; neuroprotective; cytostatic; hepatotrophic; osteopathic; vasotropic; antianginal; anorectic.
                                                                                                                                                                                                                                                                                              Novel human kinase proteins (PKIN) useful for diagnosing, treating, preventing immune disorders, cardiovascular diseases and disorders affecting growth and development associated with abnormal expression
                                                                                                                                                                                                                                                                                                                                                                                                                               Yang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAE04366 standard;
                                                                                                                                                                   The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its cDNA are useful
                                                                                                                                                                                                                                                   Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                Yang J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful to detect upstream sequences such as promoters and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germline gene therapy for treating the above mentioned disorders. The present sequence is human kinase (PKIN)-7.
This polypeptide comprises human protein kinase KDS2, protein associated with signal transduction. KDS2 has kinase domain related to that of Ste20 (KDS1 = Kinase related to Ste20). KDS2 cDNA (see AAX07075) was isolated to Ste20).
                                                                                                                                                                                     New isolated vertebrate kinase - used to develop products for the diagnosis and treatment of disorders involving cellular processes such as signal transduction processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC human bone marrow cDNA library. A clone (see AAX07074) encoding the CC highly homologous KDS1 (see AAW97676) was also obtained. Both KDS1 CC and KDS2 have Glu/Gln-rich regions at their C-terminus (see also CC AAW97678-79) suggesting an alpha-helical structure that may play a CC within the cells, which may be necessary for function. A method CC within the cells, which may be necessary for function. A method CC for producing KDS polypeptides in host cells is provided. Since CC KDS molecules have kinase activity, they are useful as modulating CC agents in regulating a variety of cellular processes such as signal CC transduction pathways. These pathways may regulate cytoskelton, CC secretion, growth, apoptosis, superoxide generation, and specific CC used for treating disorders involving aberrant expression of CC mammalian KDS genes. They can also be used for detection, dray screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of phosphorylating MEK3 (a MAP/EKK kinase). TAO kinases, which is capable polypeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinases and (b) in the form of fragments, for detecting TAO kinase polynucleotides can be used: (a) for recombinant expression of TAO kinases; and (b) in the form of fragments, for detecting TAO kinase polynucleotides in standard hybridisation and amplification kinases are highly specific for MEK3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a consensus peptide sequence conained in novel STE2O-related protein kinases. The invention relates to a nucleic acid molecule encoding a kinase polypeptide selected from STEX, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4 and PAK5. The proteins are used to identify agonists and antagonists, and to raise antibodies. The polynucleotides are useful in gene therapy protocols. The polynucleotides, polypeptides, antibodies, antagonists and agonists may be used to treat diseases such as immune-related disorders and diseases (e.g. rheumatoid anthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. Crohn's disease), asthma, and organ transplantation, chronic inflammatory pelvic disease, multiple sclerosis, organ transplantation, myocardial infarction, cardiovascular disease, stroke, renal failure, oxidative stress-related contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                neurodegenerative disorders (e.g. amylotrophic lateral sclerosis, Parkinson's disease and Leigh syndrome), cancer, cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes mellitus, fibrotic and mesangial disorders. The proteins may also be useful for cell growth regulation (e.g. in wound healing), T cell activation, mitosis control, and as immunosuppressants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of kinase-related diseases

These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions
                                                                                                                                                                                                                                                                                                                                                       infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.

                                                                                                           cc invention relates to nucleic acid molecule encoding a kinase polypeptide cc selected from STLK2, STLK3, STLK4, STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, CC ZC4, KHS2, STLU1, SULU3, GEZ2, PAK4 and PAK5. The proteins are used to CC identify agonists and antagonists, and to raise antibodies. The polynucleotides collected in gene therapy protocols. The polynucleotides, collected disorders and agonists may be used to treat cc diseases such as immune-related disorders and diseases (e.g. rheumatoid cc rohn's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, chronic inflammatory bowel disease (e.g. crhinitis, autoimmunity, and organ transplantation, myocardial cc infarction, cardiovascular disease, stroke, renal failure, oxidative stress-related neurodegenerative disorders (e.g. amylotrophic lateral cc cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes cardiomyopathies, ischemic disorders inflammatory disorders, diabetes

The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antionvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antihinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       related to Ste20). KDS1 cDNA (see AAX07074) was isolated from a Chuman bone marrow cDNA library. A clone (see AAX07075) encoding the highly homologous KDS2 (see AAW97677) was also obtained. Both KDS1 and KDS2 have Glu/Gln-rich regions at their C-terminus (see also AAW97678-79) suggesting an alpha-helical structure that may play a role in covalently localising these proteins to a specific site within the cells, which may be necessary for function. A method for producing KDS polypeptides in host cells is provided. Since KDS molecules have kinase activity, they are useful as modulating agents in regulating a variety of cellular processes such as signal transduction pathways. These pathways may regulate cytoskeleton, secretion, growth, apoptosis, superoxide generation, and specific gene transcription. KDS polypeptides and polypucleotides can be used for treating disorders involving aberrant expression of

Recombinant CSIGP can be produced in host cells by transforming them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is cell signalling protein-7 (CSIGP-7) encouply cDNA obtained from Incyte clone 2948818 of KIDNFET01 library. expressed in reproductive, haematopoletic/immune and nervous

CC invention relates to nucleic acid molecule encoding a kinase polypeptide conservation relates to nucleic acid molecule encoding a kinase polypeptide conservation relates to nucleic acid molecule encoding a kinase polypeptide conservation and page the polynucleotine are used to conservation and page therapy protocols. The polynucleotides are useful in gene therapy protocols. The polynucleotides, conservation and adjoints may be used to treat conservation as immune-related disorders and diseases (e.g. rheumatoid arthritis, artherosclerosis, chronic inflammatory bowel disease (e.g. crohn's disease), asthma, osteoarthritis, psoriasis, atherosclerosis, chronic inflammatory bowel disease (e.g. crohn's disease, multiple sclerosis, organ transplantation, myocardial confidence of the polynucleotides and conservative disorders (e.g. amylotrophic lateral sclerosis, Parkinson's disease, stroke, renal failure, oxidative stress-related neurodegenerative disorders (e.g. amylotrophic lateral sclerosis, Parkinson's disease and Leigh syndrome), cancer, diabetes cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes conservations, first-protice and mesancial disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                     sequences (ABL0184)

                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 9; SEQ ID No 632; 837pp; English.

A;Description: SK2, a putative rat homologue of yeast protein A;Reference number: Z21463
A;Accession: T34021
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein kinase SK2 - rat
C; Species: Rattus norvegicus (Norway rat)
C; Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 29-Oct-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
